PROFESSIONAL SUMMARY

Cybersecurity undergraduate specializing in AI-driven threat detection and secure web systems. CTF winner with a 92% accuracy phishing detection model; built full-stack platforms analyzing 1000+ URLs using VirusTotal, AbuseIPDB, and Google Safe Browsing APIs. Frontend Intern at Agnivora Digital; experienced in React, FastAPI, TensorFlow, and Docker.

EDUCATION

VIT Bhopal University	2023 – 2027
<i>B.Tech – CSE (Cybersecurity) CGPA: 8.25</i>	<i>Bhopal, India</i>
Senior Secondary (Class XII)	2022 – 2023
<i>Percentage: 75.66%</i>	<i>India</i>
Secondary School (Class X)	2020 – 2021
<i>Percentage: 80.83%</i>	<i>India</i>

EXPERIENCE

Frontend Intern	May 2026 – July 2026
<i>Agnivora Digital Private Limited</i>	<i>In-Office</i>
- Selected based on proficiency in React and TailwindCSS; contributing to production-grade UI development as part of the core engineering team. - Building and iterating on responsive frontend components, collaborating with the design and backend teams to ship client-facing features.	

PROJECTS

CyberSphere <i>React, FastAPI, Python, TailwindCSS</i>	2025	GitHub	Live
- Built a full-stack cybersecurity SaaS platform with phishing detection, AES-256 encrypted file sharing, and cloud security analysis. - Integrated VirusTotal and Google Safe Browsing APIs to analyze 1000+ URLs/messages with AI-based threat scoring, reducing false positives by ~18%. - Implemented a React + TailwindCSS real-time threat dashboard with malware scanning and secure cloud storage workflows.			
YouTube Guardian <i>FastAPI, Python, Machine Learning</i>	2026	GitHub	Live
- Developed a real-time YouTube live chat threat detection system for phishing and malicious link identification. - Trained a TF-IDF + Logistic Regression model on 10,000+ labeled phishing/legitimate messages achieving 92% detection accuracy. - Integrated VirusTotal and AbuseIPDB APIs for real-time suspicious activity analysis and automated moderation support.			
GIS Urban AI Analyser <i>Python, Flask, TensorFlow, OpenCV, Docker</i>	2025	GitHub	Live
- Built an AI platform using a custom U-Net model to segment satellite imagery into 6 land-use categories (Buildings, Roads, Vegetation, Water, Bare Land) on real-world aerial datasets. - Generated Urban Growth Prediction Heatmaps via spatial feature engineering; integrated Groq API (Llama 4 Scout) for environmental recommendations on urban sprawl and flood risk. - Containerised with Docker and deployed publicly on Hugging Face Spaces; combined Computer Vision, Spatial Intelligence, and Generative AI in a single end-to-end ML pipeline.			

ACHIEVEMENTS & LEADERSHIP

- PR Team Member** – Null Community VIT Bhopal Student Chapter; led cybersecurity event outreach for 2 years (2024–2026).
- Winner** – CTF, HackSecure by Null Community VIT Bhopal; solved web exploitation and OSINT-based challenges.
- 3rd Position** – Ideathon, HackSecure VIT Bhopal; presented an AI-powered cybersecurity threat detection solution.

TECHNICAL SKILLS

Languages: Python, C++, JavaScript, HTML, CSS
Frameworks & Tools: FastAPI, Flask, React, TailwindCSS, TensorFlow/Keras, Docker, Streamlit, Git, Linux
Cybersecurity: Phishing Detection, Threat Intelligence, URL Reputation Analysis, Cloud Security, Vulnerability Assessment
Security Tools: Wireshark, Nmap, Burp Suite
APIs & Libraries: VirusTotal API, Google Safe Browsing API, AbuseIPDB, Groq API, Scikit-learn, OpenCV, Pandas, NumPy, SciPy
